

Office Productivity Connector

The Aras Office Productivity Connector integrates Microsoft Office 365 applications such as Word, Excel, Outlook or Visio with the Aras Innovator platform, allowing users to access, edit, and save PLM-managed content without leaving familiar tools. This connector streamlines document creation and collaboration by enabling users to open controlled templates, link documents to parts or change records, and initiate workflows directly from Office. It ensures version control, audit trails, and centralized data governance while improving user productivity. By bridging the gap between everyday productivity tools and enterprise PLM, the connector enhances adoption, reduces duplication, and maintains data consistency across teams and departments.
