

Out of the Box Setup

When Aras 3D Visualization is installed, the following OOTB setup is used in the **ConversionServerConfig.xml** file:

Important

Due to differences between the Windows and Linux file systems, it is required to use OS-specific path separators in paths. Because the Linux file system is case-sensitive, there is a significant difference between these file names: **.!path/to/file.xml** and **.!path/to/File.xml**. For more information about cross-platform development, refer to the *Cross-platform development* section in the *Aras Innovator 39 - Programmer's Guide*.

Important

The Streaming Viewer currently cannot be deployed in a cloud environment. The HOOPS Server must be deployed with networked file access to a single vault containing view files for rendering.

Important

Only one Streaming Viewer can be installed on one machine at a time.
