

Prerequisites

Aras DevOps administrators or contributors must have an installed Aras Innovator instance prior to following the steps outlined in this document. It is recommended that all administrators read the Aras DevOps – User Guide included in the Build and Deployment Service package, as it explains how to effectively utilize the Aras DevOps service included as part of the Aras Enterprise subscription to manage Aras Innovator customizations throughout the entire lifecycle of the Aras Innovator implementation.

It is also recommended that all administrators or contributors refer to the latest Aras 3D Visualization Installation Guide to install Aras 3D Visualization to the repository.

Aras 3D Visualization 39 installation and operation will require the following:

- HOOPS Converter Linux package (HOOPS_Converter_Linux.tar.gz)
- Aras.CADConverter3 Feature License.

Important

The HOOPS Communicator Linux package and feature licenses are not included in the installation package. To obtain them, please contact Aras Support (support@aras.com).
