

CAD Conversion Errors Based on Locked CAD Items

Referring to the data model above, and the direct storage of files and Property data from the conversion process on a CAD Item, it is possible that during the CAD Conversion process the CAD Item is locked; thus, preventing an update. CAD Conversion processes are designed to execute multiple times and there are situations where this subsequent attempt to reconvert is required or will otherwise be successful. Failures encountered from locked CAD Items won't be successful even after multiple tries unless the CAD is manually unlocked.
