

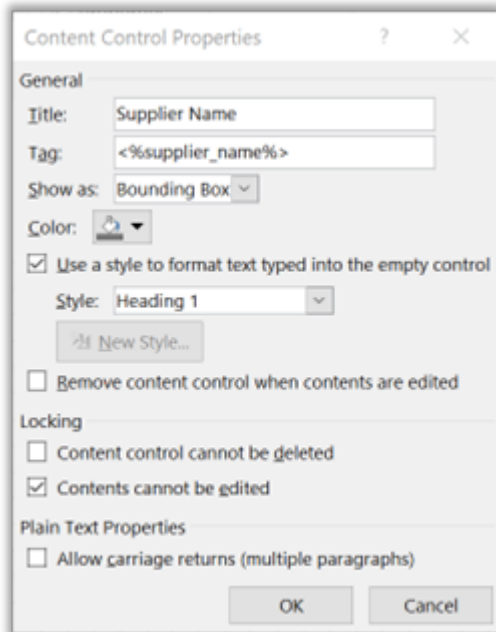

Mapping to remove empty content controls along with Label

1. Add label as plain text content control. In the properties dialog, check the option “Contents cannot be edited” .

2. Label content control and data content control title should be same as shown below

The 'Content Control Properties' dialog box is shown for a content control titled 'Supplier Name'. The 'Tag' is set to '<%supplier_name%>'. Under the 'General' tab, 'Show as' is set to 'Bounding Box' with a color selection icon. The 'Use a style to format text typed into the empty control' checkbox is checked, with 'Heading 1' selected in the 'Style' dropdown. A 'New Style...' button is visible. Under the 'Locking' section, 'Contents cannot be edited' is checked. The 'Plain Text Properties' section has 'Allow carriage returns (multiple paragraphs)' unchecked. 'OK' and 'Cancel' buttons are at the bottom.

The 'Content Control Properties' dialog box is shown for a content control titled 'Seller Notes'. The 'Tag' is set to '<%custom_notes%>'. Under the 'General' tab, 'Show as' is set to 'Bounding Box' with a color selection icon. The 'Use a style to format text typed into the empty control' checkbox is unchecked, and 'Default Paragraph Font' is selected in the 'Style' dropdown. A 'New Style...' button is visible. Under the 'Locking' section, 'Contents cannot be edited' is checked. The 'Plain Text Properties' section is not visible. 'OK' and 'Cancel' buttons are at the bottom.

3. Template designers can use line and spacing settings in Microsoft Word to add extra space after a content control. As shown in below image for Seller Note data content control.
