

Auto-Execution

By default, users must refresh the view (by selecting the refresh button in the Tree Grid View toolbar) to load the 3D View and execute the initial query for the Tree Grid View (see Section Dynamic Viewer Process Overview) However, it is possible to execute the initial query when the 3D View is opened by selecting the **Execute Query On Opening Dynamic Viewer** option in the Secure Social Preference settings.

The screenshot displays the 'Preference' settings page, specifically the 'Secure Social' tab. The 'Identity Id' is set to 'World'. The 'Secure Social' tab is selected in the navigation bar. The settings are organized into several sections:

- Default bookmark:** A dropdown menu.
- Default Number Of Replies:** A text input field containing the value '3'.
- Default Number Of Flagged-By Users:** A text input field containing the value '2'.
- Max Lines In Messages Before "More":** A text input field containing the value '3'.
- Message Notification:** A section containing three checkboxes:
 - Within the web client
 - Email on every message
 - Email digest
- Prefix Text For Highlight Text Markup:** A text input field containing the value 'Change to:'.

Three checkboxes are located on the right side of the page:

- Use Standard Toolbar For Viewers
- Use Legacy 3D View Files
- Execute Query On Opening Dynamic Viewer

The 'Execute Query On Opening Dynamic Viewer' checkbox is highlighted with a red box.
