

Aras 3DV Toolbar

The Monolithic, Dynamic and Streaming Viewers use the same **3DV** toolbar, which is dynamic and flexible. When opening any of the Viewers on a newly opened CAD Document, this toolbar is collapsed and located in the upper left corner of a 3D scene view.

The collapsed **3DV** toolbar has the following elements:

1. The **Movement** bar: dragging this bar moves the **3DV** toolbar through the 3D scene.
2. The **View** button: clicking this button switches the 3D scene to the 3D model viewing mode and either shows or hides the **Basic Viewing** toolbar; see the *Viewing Toolbars* section.
3. The **Markup** button: clicking this button switches the 3D scene to the 3D model markup mode and either shows or hides the **Basic Markup** toolbar; see the Markup Toolbars section.
4. A larger button indicates that the 3D scene is currently in a mode launched by this button. For example, if the **View** button is larger than the **Markup** button, the scene is in the viewing mode.
