

Prerequisites

To install Aras ProAppDesigner, **users must confirm** that the installation of Aras Innovator meets the minimum requirements to run ProAppDesigner.

Check the eligibility of code tree and database:

From the **TOC**, select **Administration, Variables**.

VersionMajor	VersionMinor	VersionServiceUpdate
14	0	32
14	0	33
14	0	34
14	0	35
14	0	36
14	0	37

If it does not meet the service pack requirements listed in the previous steps, contact Aras to discuss options.

Aras DevOps administrators or contributors **must have**:

- An installed Aras Innovator instance before following the steps outlined in this document.
- It is **recommended** that all administrators read the **Aras DevOps – User Guide**. It explains how to utilize the Aras DevOps service effectively.
