

OnSelectFlyout Event

The **OnSelectFlyout** event is triggered when opening the SelectItem flyout and is supported by the Item and Items controls. In this event handler, the admin can implement custom scripts and use the `setSelectFilterExpression` API to apply a custom filter expression.

// creating a custom expression string

```
let expressionString = "classification EqualTo Item AND id NotEqualTo  
8D58C2D8DC1649279E64CCF5BD2FF7A7";
```

*// Refer to **filterCollectionItems** section on how to build your expression string*

```
appStudioWizard.setSelectFilterExpression(controlName, expressionString,  
enforce);
```
