Expand Level 1

- **Add:** Select Add action to add an item as a child or sibling of the selected node.
- **Insert:** Select Insert action to insert an item as a child or sibling of the selected node. In order to select existing item, it shows Insert Flyout.
- **Open Relationship Item:** Select OpenRelationshipItem action to open relationship item in its own tab.
- **Open Related Item:** Select Open Related Item action to open related item in its own tab.
- **Up:** Select Up action to move selected row above the previous row. Up action will be enabled only when the parent item is locked.
- **Down:** Select Down action to move selected row below the next row. Down action will be enabled only when the parent item is locked.
- **Delete:** Select Delete action to delete selected row from the table. Delete action will be enabled only when the item is locked.
- **Lock:** Select Lock action to lock selected row for exclusive edit. If the associated item with the row is locked by someone else, you won't be able to lock the row.
- **Export Excel:** Select ExportExcel action to export all the visible data shown in the table to an excel file.
- **Export PDF:** Select ExportPDF action to export all the visible data shown in the table to a PDF file.
- **Expand Level:** By default, when the node is expanded it only gets its first level children. If you want to expand to multiple levels, expand level value can be set.
