Aras Packages available locally

Listed below are all Aras packages available on local disk. Select a desired package version, then pick Install to immediately install. You can also add a local package reference to install. To install Aras subscriber-only features such as Service Packs, first download the package from the Aras FTP site and then use the “Add package reference” option.

 Add package reference

 Aras Technical Documentation

 **Unified Change Management**

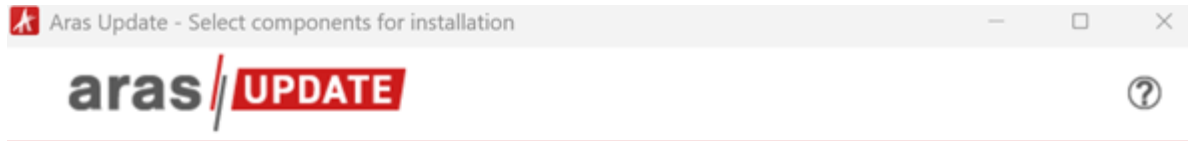

Unified Change Management (UCM) provides a configurable and scalable framework for managing changes across the product lifecycle. It standardizes change processes while allowing organizations to tailor workflows, approvals, and automation rules to their specific needs. Through a single unified model, UCM improves traceability, accelerates decision-making, and enables rapid adoption of best-practice change processes with flexibility to extend as business requirements evolve.

☒ Unified Change Management Release 30 (14.1.0) (Reference package)

[Install](#) [Remove from list](#)

6. Click **Install**.

Unified Change Management Unified Change Management Release 30 (14.1.0) requires the following components for proper installation. Select the components you intend to install.

Computer name: AzureAD/AC8P2FF94

- ☒ **Aras Innovator Client Code Tree Updates**
Installs Unified Change Management UI components to Innovator Client
- ☒ **Unified Change Management Libraries**
Installs Unified Change Management Libraries to Innovator Server
