

# OnInsertFlyout Event

The **OnInsertFlyout** event is triggered when opening the InsertItem flyout and is supported in Table, Worksheet, and TreeTable controls. In the event handler, the admin can write custom scripts and use the `setInsertFilterExpression` API to apply a custom filter expression.

*// creating a custom expression string*

```
let expressionString = "classification EqualTo Item AND id NotEqualTo  
8D58C2D8DC1649279E64CCF5BD2FF7A7";
```

*// Refer to **filterCollectionItems** section on how to build your expression string*

```
appStudioWizard.setInsertFilterExpression(controlName, expressionString,  
enforce);
```
