

3D Viewer Preferences

With the **3D Viewer Preferences** dialog, an end user can configure the following preferences for viewing:

- **Projection:** a 3D model projection mode.
- **Zoom to:** an alignment points for zooming with a wheel mouse button.

These configurations are persistent for a given Viewer and logged-in user. An end user can have different configurations for the Monolithic and Dynamic/Streaming Viewers.

The **Preferences button** on the **Standard Viewing** toolbar provides access to the **3D Viewer Preferences** dialog.
