

Logging into Aras Innovator

Aras Innovator uses a Web Browser as the container for its administration and end-user interface. Refer to the relevant document for client settings configuration.

- *Aras Innovator 40 – Client Settings for Chrome on Windows*
- *Aras Innovator 40 – Client Settings for Edge on Windows*
- *Aras Innovator 40 – Client Settings for Firefox on Windows*
- *Aras Innovator 40 – Client Settings for Chrome on Mac*
- *Aras Innovator 40 – Client Settings for Firefox on Mac*

A user with 'administrator' rights typically performs customization of Aras Innovator. Initial setup of Aras Innovator determines the 'admin' username logon. By default, the user 'admin' has a logon password of 'innovator'.

To log on as administrator

1. Open a browser and point your web browser at `http://<servername>/<web_alias>`

Important

The complete login URL is determined by the Web Server virtual directory name setup. (e.g., `http://myserver/InnovatorServer`).

2. Enter the default login information.
 1. Enter the default administrator's designated username and password (username 'admin', password 'innovator').
 2. Select the correct database from the drop-down menu. This is the database you named in the 'InnovatorServerConfig.xml'
3. Click **Login**.

Important

Anyone can log in with administrative access with this default user. While this is acceptable in a development environment, it is recommended that you set up a new account for production databases with administrative privileges and disable this login.
