

Prerequisites

To apply Hotfix-076394.30 to Aras Innovator, confirm that the software is currently eligible for this hotfix. Next, download the necessary materials for the upgrade.

Checking for Eligibility

Important
The Microsoft ASP.NET Core / .NET Runtime and Hosting Bundle for .NET 10 must be installed on each server machine that is running Aras Innovator systems.

The following steps outline the process to check if Aras Innovator is eligible to apply Hotfix-076394.30.

- 1. Log in to Aras Innovator as an administrator.
- 2. From the **Help** menu, select **About**.
- 3. Confirm that the window shows the following MSBuild Number: 000000.00.
- 4. Navigate to **Administration\Variables** in the Table of Contents.
- 5. Confirm that the following set of variables is listed:

Variable Name	Variable Value
VersionMajor	14
VersionMinor	30
VersionServiceUpdate	0
MSBuildNumber	000000.00

If eligibility requirements aren't met, contact Aras Support before installing.

Required Tools and Materials

If the Prerequisites listed in the previous section have been met, the next step is to obtain the required upgrade files and utilities.

Aras Update Tool

The **Aras Update** tool can be downloaded from <https://www.aras.com/support/downloads> .
Aras Update should be downloaded and installed locally on every node running an Aras Innovator

component.

Hotfix Patch

Subscribers can obtain the patch from <https://mft.aras.com/files> . The zip file with the hotfix is inside the same directory as the Aras Innovator Release CD Image. Copy the '.zip' file with a hotfix patch to a local machine.

Important

The current MFT-based hotfix distribution will be replaced by a subscriber-aware delivery mechanism integrated into Aras Update. When the new mechanism is released, subscribers will discover, download, and install entitled patches directly from a Subscriber tab in Aras Update, without manual MFT download. This guide will be revised to reflect the new procedure once the mechanism is available.

Checking for Additional Features

Aras Applications and Platform Components

If any Aras Applications or Platform Components are being used, contact Aras Corporation Support at [Aras Subscriber Portal](#) to confirm their compatibility with the .NET 10 update.
